

## Designing a World Class Visitor Attraction

The reefLIVE Aquarium building has been designed by Ethos Architects, working alongside a highly experienced aquarium design team led by Imagemakers and Kay Elliott Architects.

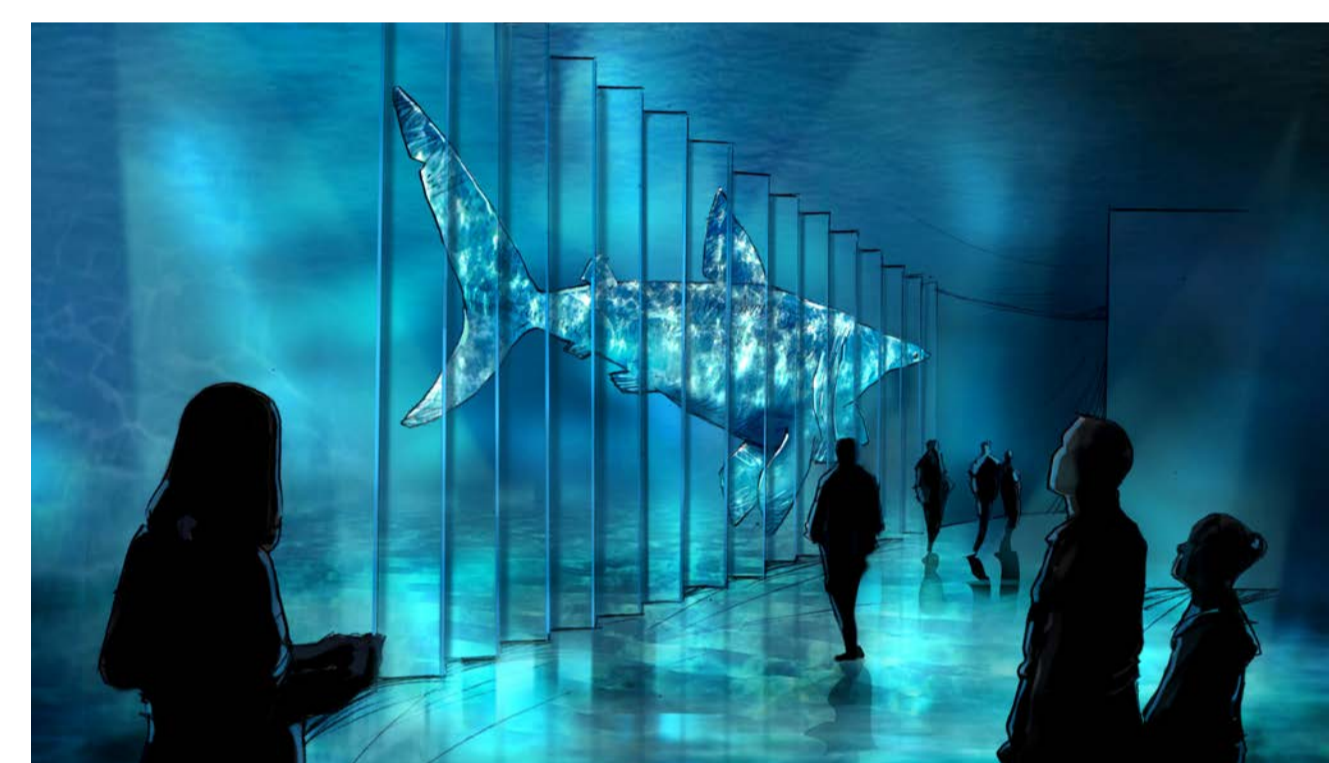

### Interior Aquarium Design

The approach to designing the building has been to create a building that can maintain the highest technical standards of animal wellbeing, while also operating as an enjoyment and education destination.

reefLIVE will place the visitor at the heart of the marine life experience by using high quality live displays to recreate international marine environments that are 'the best of the best'.

### More than an Aquarium

After normal Aquarium hours, the reefLIVE Aquarium will become a unique venue for events and private hire. Interested parties can enjoy a private tour of the aquarium or use the backdrop of the Coral Triangle Ocean display to host a reception, launch a product or present awards.

### Immersive Experiences

Visitors will take a journey from Polar Ice to the open oceans off the Azores; from the wild West Coast of Ireland to the deepest depths of the Atlantic Ocean and from a wonderful insight into the incredible life off of the North Pacific Coast of America to the exotic proliferation of colour and activity of the Coral Triangle of Indonesia.

To explore these exciting marine environments, reefLIVE will use cutting edge digital technology to create totally immersive environments.

Subject to planning consent, construction will begin during 2020 and we hope to open to the public in Spring 2021.
